Economic Challenges Influence Global Workforce Reductions

For employers anticipating a staffing decrease in the second quarter, **economic uncertainty is cited as the main challenge**, followed by adapting to market changes.

Economic challenges impacting staffing

Market shifts lowering job demand

Restructuring or downsizing

Adjusting to current demand

Automation has reduced some roles

Process improvements are consolidating roles

Project-based roles are ending

Skill changes have reduced certain roles

Other reasons

Employment Outlooks Across Europe and the Middle East

Hiring expectations remain the lowest in Europe and the Middle East (20%) and has strengthened by one point since Q1 2025 and four points year-over-year.

Outlooks vary across the region with employers most keen to hire in the U.K.

The strongest Outlook globally for the Energy and Utilities industry vertical was reported by employers in Switzerland (59%), Healthcare and Life Sciences in Austria (55%), and Transport, Logistics, and Automotive in the Netherlands (53%).

Austria | Employment Outlooks Across Key Industry Sectors

Businesses in the Health Care and Life Sciences industry reported the brightest outlook, increasing both since the previous quarter and compared to the same time last year.

*Government or Public Service; Not for Profit/NGO/Charity/Religious organization; Other Industry; Other Transport, Logistics & Automobiles Sub-Industry; Educational Institutions; Agriculture & Fishing

About the Survey

About the Survey

The ManpowerGroup Employment Outlook Survey is the most comprehensive, forward-looking employment survey of its kind, used globally as a key economic indicator. The Net Employment Outlook is derived by taking the percentage of employers anticipating an increase in hiring activity and subtracting from this the percentage of employers expecting a decrease in hiring activity. Running since 1962, various factors underpin the success of the Survey:

Unique – It is unparalleled in its size, scope, longevity and area of focus. The ManpowerGroup Employment Outlook Survey is the most extensive, forward-looking employment survey in the world, asking employers to forecast employment over the next quarter. In contrast, other surveys and studies focus on retrospective data to report on what occurred in the past.

Independent – The survey is conducted with a representative sample of employers from throughout the countries and territories in which it is conducted. The survey participants are not derived from ManpowerGroup's customer base.

Robust – The survey is based on interviews with 39,449 public and private employers across 41 countries to measure anticipated employment trends each quarter. This sample allows for analysis to be performed across specific sectors and regions to provide more detailed information. The sample for Austria consists of 525 interviews.

Focused – For more than six decades the survey has derived all of its information from a single question: "How do you anticipate total employment at your location to change in the three months to the end of June 2025 as compared to the current quarter?"

Survey Methodology – Survey responses were collected from January 2-31, 2025. Size of organization and sector are standardized across all countries and territories to allow international comparisons.

Forward-Looking Statements –

This report contains forward-looking statements, including statements regarding labor demand in certain regions, countries and industries, and economic uncertainty. Actual events or results may differ materially from those contained in the forward-looking statements, due to risks, uncertainties and assumptions. These factors include those found in the Company's reports filed with the U.S. Securities and Exchange Commission (SEC), including the information under the heading "Risk Factors" in its Annual Report on Form 10-K for the year ended December 31, 2024, whose information is incorporated herein by reference. ManpowerGroup disclaims any obligation to update any forward-looking or other statements in this release, except as required by law.

Frequently Asked Questions

What is meant by Net Employment Outlook (NEO)?

The Net Employment Outlook is derived by taking the percentage of employers anticipating an increase in hiring activity and subtracting from this the percentage of employers that expect to see a decrease in employment at their location in the next quarter. A positive Net Employment Outlook figure means that, on balance, there are more employers who expect to add to their headcount in the following three months than those who intend to reduce staff.

What is Seasonal Adjustment and why is it used in the ManpowerGroup Employment Outlook Survey?

Seasonal adjustment is a statistical process that allows the Survey data to be presented without the impact of hiring fluctuations that normally occur through the course of the year, usually as a result of various external factors, such changes in weather, traditional production cycles, and public holidays. Seasonal adjustment has the effect of flattening peaks and smoothing troughs in the data to better illustrate underlying employment trends and provide a more accurate representation of the ManpowerGroup Employment Outlook Survey results.

How are companies selected for the survey?

Employers are selected based on the types of companies and organizations they represent. We want to ensure that our panel is representative of each participating country's national labor market, so each country's panel is built in proportion to that country's overall distribution of industry sectors and organization sizes.

Who do you interview in each company?

The person we select to interview will be someone with a good overview of staffing levels and hiring intentions within their organization. Normally this will be the head of HR or an HR manager. However, in smaller organizations, that person may be a general manager or even the CEO.
